(54) Title: COMPOUNDS HAVING REVERSIBLE INHIBITING ACTIVITY OF CARNITINE PALMITOYL-TRANSFERASE

## (57) Abstract

Compounds of formula (I) wherein the groups are as defined in the description are disclosed. The compounds of formula (I) are endowed with reversible inhibiting activity of carnitine palmitoyl-transferase and are useful in the preparation of medicaments useful in the pathologies related to a hyperactivity of carnitine palmitoyl-transferase, such as hyperglycemia, diabetes and pathologies related thereto, heart failure, ischemia.

**Compounds having reversible inhibiting activity of  
carnitine palmitoyl-transferase**

The present invention relates to compounds having inhibiting activity against carnitine palmitoyl transferase. The present invention relates also to pharmaceutical compositions containing at least one of these compounds active ingredients and to the use of said compounds in the preparation of medicaments useful in the treatment of pathologies related to a hyperactivity of carnitine palmitoyl-transferase, in particular hyperglycaemic states, such as diabetes and related pathologies and of congestive heart failure.

Background of the invention

To date, hypoglycaemic therapy is based on the use of drugs having different mechanism of action (Arch. Intern. Med., 1997, 157, 1802-1817).

Insulin and its analogues represent the most used therapy, recurring to the direct hypoglycaemic action of this hormone.

Other compounds act indirectly by stimulating insulin release (sulphonylureas). A different target of hypoglycaemic drugs is represented by the reduction of glucose intestinal absorption through the inhibition of intestinal glucosidases, or by reducing insulin resistance.

Hyperglycaemia is also treated with gluconeogenesis inhibitors, such as biguanides.

Some works have also stressed out the relationship between gluconeogenesis and fatty acid oxidation.

The membrane bound long-chain acylcarnitine transferases, also known as carnitine palmitoyltransferase (CPT), are widely represented in organs and subcellular organelles (Bieber, L.L. 1988 Ann. Rev. Biochem. 57: 261-83). The well-established role of this category of enzymes is the transport of activated long-chain fatty acids through mitochondrial membranes. In this context, the outer mitochondrial membrane CPT I catalyzes the formation of long-chain acylcarnitines that are transported across the mitochondrial membrane by a specific carrier, and reconverted into long-chain acyl-coenzyme A esters by CPT II, which resides in the inner mitochondrial membrane. Long-chain acyl-CoAs are then oxidised to acetyl-coenzyme A, which activates a key gluconeogenetic enzyme: pyruvate carboxylase.

Other works report that diabetic patients have high blood levels of fatty acids, whose liver oxidative fate gives rise to an increase of acetyl-coenzyme A, ATP and NADH. High availability of these compounds maximally stimulates gluconeogenesis, which is in part responsible of the elevated glucose blood levels in diabetic patients. CPT inhibition indirectly reduces the extent of liver gluconeogenesis, and hence blood glucose levels.

CPT inhibitors have been disclosed in J. Med. Chem., 1995, 38(18), 3448-50 and in the corresponding European patent

application EP 0 574 355 as potential derivatives with hypoglycaemic activity.

Aminocarnitines N-acylated with -COR residue, wherein R is an aliphatic residue with 1 to 19 carbon atoms are disclosed in 5 WO85/04396 useful for investigating the role of transferases in the body, in particular the specificity of carnitine acyltransferase.

Emeriamine and its analogues are disclosed in EP 0 127 098 and J.Med. Chem. 1987, 30, 1458-1463.

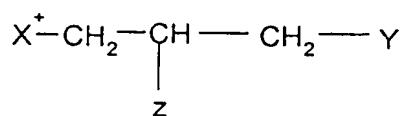

Notwithstanding the mechanism of activity above outlined, to 10 date, drugs inhibiting CPT capable to effectively counteract hyperglycaemia do not exist. For some products, such as tetradecyl glycidic acid, or etomoxir, myocardial hypertrophy have been evidenced as side effects (Life Sci., 1989, 44, 1897-1906).

None of the therapies presently used in clinic is fully satisfying, 15 in particular due to the onset of unwanted side effects, such as severe hypoglycaemia, allergic phenomena, oedema, diarrhoea, intestinal disturbances, kidney toxicity, etc.

The necessity to obtain alternative effective therapies for hyperglycaemia still remains.

20 Abstract of the invention

It has now surprisingly been found that compounds of general formula (I):

wherein:  $X^+$  is selected from the group consisting of  $N^+(R_1, R_2, R_3)$  and  $P^+(R_1, R_2, R_3)$ , wherein

( $R_1, R_2, R_3$ ), being the same or different, are selected in the 5 group consisting of hydrogen and C<sub>1</sub>-C<sub>9</sub> straight or branched alkyl groups, -CH=NH(NH<sub>2</sub>), -NH<sub>2</sub>, -OH, or two or more R<sub>1</sub>, R<sub>2</sub> and R<sub>3</sub>, together with the nitrogen atom, which they are linked to, form a saturated or unsaturated, monocyclic or bicyclic heterocyclic system; with the proviso that at least one of the R<sub>1</sub>, R<sub>2</sub> and R<sub>3</sub> is 10 different from hydrogen;

Z is selected from

- OR<sub>4</sub>,
- OCOOR<sub>4</sub>,
- OCONHR<sub>4</sub>,
- 15 -OCSNHR<sub>4</sub>,
- OCSOR<sub>4</sub>,
- NHR<sub>4</sub>,
- NHCOR<sub>4</sub>,
- NHCSR<sub>4</sub>,
- 20 -NHCOOR<sub>4</sub>,
- NHCSOR<sub>4</sub>,
- NHCONHR<sub>4</sub>,
- NHCSNHR<sub>4</sub>,
- NHSOR<sub>4</sub>,

-NHSONHR<sub>4</sub>,

-NHSO<sub>2</sub>R<sub>4</sub>,

-NHSO<sub>2</sub>NHR<sub>4</sub>,

-SR<sub>4</sub>,

5       wherein -R<sub>4</sub> is a C<sub>1</sub>-C<sub>20</sub> saturated or unsaturated, straight or branched alkyl group, optionally substituted with a A<sub>1</sub> group, wherein A<sub>1</sub> is selected from the group consisting of halogen atom, C<sub>6</sub>-C<sub>14</sub> aryl, heteroaryl, aryloxy or heteroaryloxy group, said aryl, heteroaryl, aryloxy or heteroaryloxy groups being optionally 10 substituted with one or more C<sub>1</sub>-C<sub>20</sub> saturated or unsaturated, straight or branched alkyl or alkoxy group and/or halogen atom;

Y<sup>-</sup> is selected from the group consisting of -COO<sup>-</sup>, PO<sub>3</sub>H<sup>-</sup>, -OPO<sub>3</sub>H<sup>-</sup>, tetrazolate-5-yl;

15       with the proviso that when Z is -NHCOR<sub>4</sub>, X<sup>+</sup> is trimethylammonium, Y is -COO<sup>-</sup>, then R<sub>4</sub> is C<sub>20</sub> alkyl;

with the proviso that when Z is -NHSO<sub>2</sub>R<sub>4</sub>, X<sup>+</sup> is trimethylammonium and Y is -COO<sup>-</sup>, then R<sub>4</sub> is not toyl;

with the proviso that when Z is -NHR<sub>4</sub>, X<sup>+</sup> is trimethylammonium and Y is -COO<sup>-</sup>, then R<sub>4</sub> is not C<sub>1</sub>-C<sub>6</sub> alkyl.

20       The present invention further comprises the use of the compounds of the above-mentioned formula (I) as active ingredients for medicaments, in particular for medicaments useful for the treatment of pathologies related to a hyperactivity of carnitine palmitoyl carnitine, such as and in particular hyperglycemic states,

diabetes and related pathologies, congestive heart failure and dilatative cardiopathy.

The present invention comprises pharmaceutical compositions containing compounds of formula (I) as active ingredients, in admixture with pharmaceutically acceptable vehicles and excipients.

The present invention comprises also processes for the preparation of compounds of formula (I).

Detailed description of the invention

Within the scope of the present invention, as examples of C<sub>1</sub>-C<sub>20</sub> linear or branched alkyl group, methyl, ethyl, propyl, butyl, pentyl, hexyl, heptyl, octyl, nonyl, decyl, undecyl, dodecyl, tridecyl, tetradecyl, pentadecyl, hexadecyl, heptadecyl, octadecyl, nonadecyl and eicosyl and their possible isomers are meant, such as for example isopropyl, isobutyl, tert-butyl.

Examples of C<sub>1</sub>-C<sub>20</sub> linear or branched alkenyl group are methylene, ethylidene, vinyl, allyl, propargyl, butylene, pentylene, wherein the carbon-carbon double bond, optionally in the presence of other carbon-carbon unsaturations, can be situated in the different possible positions of the alkyl chain, which can also be branched within the allowed isomery.

Examples of (C<sub>6</sub>-C<sub>14</sub>) aryl group are phenyl, 1- or 2-naphthyl, anthryl, optionally substituted as shown in the general definitions above-mentioned.

Examples of heterocyclic groups thienyl, quinolyl, pyridyl, N-methylpiperidinyl, 5-tetrazolyl, optionally substituted as shown in the general definitions above-mentioned.

As halogen atom it is intended fluorine, chlorine, bromine, 5 iodine.

The compounds of formula (I) can be also in the form of inner salts.

A first group of preferred compounds comprises the compounds of formula (I) wherein  $N^+(R_1, R_2, R_3)$  is trimethyl 10 ammonium.

A second group of preferred compounds comprises the compounds of formula (I) wherein two or more  $R_1$ ,  $R_2$  and  $R_3$ , together with the nitrogen atom, which they are linked to, form a saturated or unsaturated, monocyclic or bicyclic heterocyclic system; for example 15 morpholinium, pyridinium, pyrrolidinium, quinolinium, quinuclidinium.

A third group of preferred compounds comprises the compounds of formula (I) wherein  $R_1$  and  $R_2$  are hydrogen and  $R_3$  is selected from the group consisting of  $-CH=NH(NH_2)$ ,  $-NH_2$  and  $-OH$ .

20 Within the different embodiments of the present invention, the  $R_4$  group is preferably a  $C_7-C_{20}$  saturated or unsaturated, straight or branched alkyl group. In fact, it has been observed the length of the alkyl chain  $R_4$  significantly increases the selectivity against CPT. Preferred  $R_4$  groups are selected from the group consisting of heptyl,

octyl, nonyl, decyl, undecyl, dodecyl, tridecyl, tetradecyl, pentadecyl, hexadecyl, heptadecyl, octadecyl, nonadecyl and eicosyl.

Preferred examples of Z group are ureido (-NHCONHR<sub>4</sub>), and carbamate (-NHCOOR<sub>4</sub>, -OCONHR<sub>4</sub>) ones.

5 In particular, compounds of formula (I) wherein X<sup>+</sup>, R<sub>1</sub>, R<sub>2</sub>, R<sub>3</sub>, have the above disclosed meanings, Z is ureido (-NHCONHR<sub>4</sub>) or carbamate (-NHCOOR<sub>4</sub>, -OCONHR<sub>4</sub>), R<sub>4</sub> is a C<sub>7</sub>-C<sub>20</sub>, preferably a C<sub>9</sub>-C<sub>18</sub> saturated or unsaturated, straight or branched alkyl group, are preferred.

10 The compounds of formula (I) have an asymmetry center on carbon atom bound to a Z group. For the purposes of the present invention, each compound of formula (I) can exist both as R,S racemic mixture and as separated R/S isomeric form.

15 The compounds of formula (I) are quaternary ammonium or phosphonium derivatives always containing a Y- anionic group. Dependently on pH, each compounds of formula (I) can exist indifferently as amphotion (inner salt) or as a compound wherein Y- is present in the YH form. In such a case, X<sup>+</sup> is salified with a pharmacologically acceptable acid. Formula (I) covers all these 20 different possibilities. In case of nitrogen atoms having basic character, the salts with pharmaceutically acceptable acids, both inorganic and organic, such as for example, hydrochloric acid, sulfuric acid, acetic acid, or, in the case of acid group, such as carboxyl, the salts with pharmaceutically acceptable bases, both

inorganic and organic, such as for example, alkaline and alkaline-earth hydroxides, ammonium hydroxide, amine, also heterocyclic ones. Examples of pharmaceutically acceptable salts are chloride; bromide; iodide; aspartate; acid aspartate; citrate; acid citrate; 5 tartrate; acid tartrate; phosphate, acid phosphate; fumarate; acid fumarate; glycerophosphate; glucosephosphate; lactate; maleate; acid maleate; mucate; orotate; oxalate; acid oxalate; sulfate; acid sulfate; trichloroacetate; trifluoroacetate; methanesulfonate; pamoate and acid pamoate.

10 A first group of particularly preferred compounds comprises:

R,S-4-trimethylammonium-3-(nonylcarbamoyl)-aminobutyrate;

R,S-4-quinuclidinium-3-(tetradecyloxycarbonyl)-oxybutyrate;

R,S-4-trimethylammonium-3-(nonylcarbamoyl)-oxybutyrate;

R,S-4-trimethylammonium-3-(nonyloxycarbonyl)-oxybutyric acid

15 chloride;

R,S-4-trimethylphosphonium-3-(nonylcarbamoyl)-oxybutyrate;

R,S-4-trimethylammonium-3-(octyloxycarbonyl)-aminobutyrate;

R,S-4-trimethylammonium-3-(nonyloxycarbonyl)-aminobutyrate;

R,S-4-trimethylammonium-3-octyloxybutyrate;

20 R,S-4-trimethylammonium-3-tetradecyloxybutyrate;

R,S-1-guanidinium-2-tetradecyloxy-3-(tetrazolate-5-yl)-propane;

R,S-1-trimethylammonium-2-tetradecyloxy-3-(tetrazolate-5-yl)-  
propane;

R,S-3-quinuclidinium-2-(tetradecyloxycarbonyl)-oxy-1-propanephosphonate monobasic;

R,S-3-trimethylammonium-2-(nonylaminocarbonyl)-oxy-1-propanephosphonate monobasic;

5 R,S-3-pyridinium-2-(nonylaminocarbonyl)-oxy-1-propanephosphonic acid chloride;

R-4-trimethylammonium-3-(tetradecylcarbamoyl)-aminobutyrate;

R-4-trimethylammonium-3-(undecylcarbamoyl)-aminobutyrate;

R-4-trimethylammonium-3-(heptylcarbamoyl)-aminobutyrate;

10 R,S-4-trimethylammonium-3-(nonylthiocarbamoyl)-aminobutyrate;

R-4-trimethylammonium-3-(nonylcarbamoyl)-aminobutyrate;

S-4-trimethylammonium-3-(nonylcarbamoyl)-aminobutyrate;

S-4-trimethylammonium-3-(tetradecylcarbamoyl)-aminobutyrate;

R,S-4-trimethylammonium-3-tetradecylaminobutyrate;

15 R,S-4-trimethylammonium-3-octylaminobutyrate;

R,S-4-trimethylammonium-3-(decansulfonyl)aminobutyrate;

R,S-4-trimethylammonium-3-(nonylsulfamoyl)aminobutyrate;

S-4-trimethylammonium-3-(dodecansulfonyl)aminobutyrate;

R-4-trimethylammonium-3-(dodecansulfonyl)aminobutyrate;

20 S-4-trimethylammonium-3-(undecylsulfamoyl)aminobutyrate;

R-4-trimethylammonium-3-(undecylsulfamoyl)aminobutyrate;

R-4-trimethylammonium-3-(dodecylcarbamoyl)aminobutyrate;

R-4-trimethylammonium-3-(10-

phenoxydecylcarbamoyl)aminobutyrate;

R-4-trimethylammonium-3-(*trans*- $\beta$ -styrenesulfonyl)aminobutyrate.

The compounds of formula (I) can be prepared with reactions that are well known in the state of the art.

A process for the preparation of the compounds of claim 1, wherein

5 Z is -NHR<sub>4</sub> comprising the reaction of X<sup>+</sup>-CH<sub>2</sub>-CH(NH<sub>2</sub>)-CH<sub>2</sub>-Y<sup>-</sup>, wherein X<sup>+</sup> and Y<sup>-</sup> have the same meanings as in claim 1, of the desired structure, optionally protected on the acid Y<sup>-</sup> group, with alkane carbaldheydes, wherein the alkyl moiety is a one-term lower homologue of the desired R<sub>4</sub>, and subsequent reduction.

10 Generally, the compounds of formula (I), wherein Z is carbonate (-OCOOR<sub>4</sub>), carbamate (-OCONHR<sub>4</sub>, -NHCOOR<sub>4</sub>), thiocarbamate (-OCSNHR<sub>4</sub>, -NHCSOR<sub>4</sub>,) or thiocarbonate (-OCSOR<sub>4</sub>), are obtained by reacting a compound of formula X<sup>+</sup>-CH<sub>2</sub>-CH(OH)-CH<sub>2</sub>-Y<sup>-</sup>, wherein X<sup>+</sup> and Y<sup>-</sup> are as above defined, of the desired 15 structure, optionally protected on the acid Y<sup>-</sup> group, respectively with alkyl chloroformates, alkyl isocyanates, alkyl isothiocyanates, alkyl thiochloroformates, containing the desired R<sub>4</sub> alkyl group.

Compounds of formula (I), wherein Z is amide (-NHCOR<sub>4</sub>), thioamide (-NHCSR<sub>4</sub>), carbamate (-NHCOOR<sub>4</sub>, -OCONHR<sub>4</sub>), 20 thiocarbamate (-NHCSOR<sub>4</sub>, -OCSNHR<sub>4</sub>,), ureido (-NHCONHR<sub>4</sub>), thioureido (-NHCSNHR<sub>4</sub>), sulfonamide (-NHSO<sub>2</sub>R<sub>4</sub>), sulfinamide (-NHSOR<sub>4</sub>), sulfonamide (-NHSO<sub>2</sub>NHR<sub>4</sub>), are obtained by reacting X<sup>+</sup>-CH<sub>2</sub>-CH(NH<sub>2</sub>)-CH<sub>2</sub>-Y<sup>-</sup>, wherein X<sup>+</sup> and Y<sup>-</sup> are as above defined, of the desired structure,

optionally protected on the acid Y- group, respectively with acyl chlorides, thioacyl chlorides, alkyl chloroformates, alkyl thiochloroformates, alkyl isocyanates, alkyl thioisocyanates, alkyl sulfinyl chlorides, alkyl sulfonyl chlorides,  $\text{SOCl}_2$  and alkyl amines, 5 alkyl sulfamoyl chlorides (or  $\text{SO}_2\text{Cl}_2$  and alkyl amines), containing the desired  $\text{R}_4$  alkyl group.

Compounds of formula (I), wherein Z is  $-\text{OR}_4$  or  $-\text{SR}_4$  are obtained by the reaction of carbonyl compounds of formula  $\text{Hal}-\text{CH}_2-\text{CO-CH}_2-\text{COOR}'$ , wherein Hal is a halogen atom, preferably 10 chlorine, and R' is the residue of a suitable ester, such as for example a lower alkyl ester (an ethyl or a tert-butyl ester) with respectively alcohols and thiols  $\text{R}_4\text{OH}$  or  $\text{R}_4\text{SH}$ , wherein  $\text{R}_4$  is as above defined, to give the respective ketal or thioketal, followed by 15 the transformation of the respective ketal or thioketal into the respective ether or thioether, subsequent substitution of the Hal atom with a nucleophilic group, such as azido, phthalimido, nitro, amino, alkyl amino group, and transformation of the nucleophilic group into the  $\text{X}^+$  group, wherein  $\text{X}^+$  is  $\text{N}^+(\text{R}_1, \text{R}_2, \text{R}_3)$  or, alternatively the Hal atom is substituted with a  $(\text{R}_1, \text{R}_2, \text{R}_3)$ -substituted phosphine 20 to obtain the compounds of formula (I) wherein  $\text{X}^+$  is  $\text{P}^+(\text{R}_1, \text{R}_2, \text{R}_3)$ .

Compounds of formula (I), wherein Z is  $-\text{NHR}_4$  are obtained by reacting  $\text{X}^+-\text{CH}_2-\text{CH}(\text{NH}_2)-\text{CH}_2-\text{Y}^-$ , wherein  $\text{X}^+$  and  $\text{Y}^-$  have the same meanings as in claim 1, of the desired structure, optionally protected on the acid Y- group, with alkane carbaldheydes, wherein the alkyl

moiety is a one-term lower homologue of R<sub>4</sub>, and subsequent reduction.

Regarding the various meanings of R<sub>4</sub>, present in the different reactives, these reactives are available in the market, or can be 5 prepared according to well-known methods in literature, which the experts in the field can resort to, completing with their own knowledge of the argument.

Pharmaceutically acceptable salts are obtained with conventional methods found in the literature, and do not necessitate 10 of further disclosure.

The compounds disclosed in the present invention have reversible inhibiting activity of carnitine palmitoyl-transferase (CPT). This activity allows their use as active ingredients in the preparation of medicaments useful for the treatment and prevention of 15 hyperglycaemia, diabetes and disorders related thereto, such as, for example diabetic retinopathy, diabetic neuropathy. The compounds of the present invention are also useful as active ingredient for the treatment and prevention of cardiovascular disorders, such as congestive heart failure. The compounds of formula (I) are also 20 applicable for medicaments for the prevention and treatment of ketonic states, wherein it is intended the pathological conditions characterized by high levels of ketone bodies in blood.

Inhibiting activity mainly occurs on the isoform I of palmitoyl carnitine transferase (CPT-I).

A further object of the present invention relates to pharmaceutical compositions comprising at least a compound of formula (I), in an amount such as to produce a significant therapeutical effect. The compositions according to the present invention are conventional and are obtained with commonly used methods in the pharmaceutical industry. According to the desired administration route, the compositions shall be in solid or liquid form, suitable to the oral, parenteral, intravenous or transdermal route. The compositions according to the present invention comprise together with the active ingredients at least a pharmaceutically acceptable vehicle or excipient. Formulation co-adjuvants, for example solubilizing, dispersing, suspending, emulsionating agents can be particularly useful. Examples of suitable oral pharmaceutical compositions are capsules, tablets, granulates, powders, syrups, elixirs. Examples of suitable parenteral pharmaceutical compositions are solutions, emulsions, suspensions. Examples of suitable transdermal pharmaceutical compositions are patches, subcutaneous implants.

The compounds of formula (I) can also be used in combination with other well-known active ingredients.

The dose of the active ingredients will vary depending on the kind of active ingredient used, the administration route, the grade of pathology to be treated and the general conditions of the subject. The dosage and posology shall be determined by the clinic expert or

the physician. Generally, a therapeutic effect can be obtained at dosages comprised between 1 and 100 mg/kg body weight.

The compounds according to the present invention are useful as medicaments with hypoglycaemic activity. A further object of the 5 present invention is the preparation of a pharmaceutical composition comprising admixing at least a compound of formula (I) with suitable pharmaceutically acceptable excipients and/or vehicles.

The following examples further illustrate the invention.

10 **EXAMPLE 1**

**R,S-4-trimethylammonium-3-(nonylcaramoyl)-aminobutyrate  
(ST 1251)**

Nonyl isocyanate

A solution of decanoyl chloride (20 g, 104.8 mmoles) in acetone 15 (30 ml) was dropped into a solution of sodium azide (9.53 g, 146.6 mmoles) in water (30 ml), cooled in an ice bath. The temperature of the azide solution was kept between 10 and 15°C. After one hour, the solution was transferred in a separatory funnel and the lower phase (the aqueous one) was eliminated. The higher phase was 20 transferred into a flask containing 100 ml of toluene, previously warmed at 65°C. After 1.5 hours, the solution was evaporated to dryness, giving 13.37 g crude product, which after vacuum distillation gave 8.3 g pure product in the form of colourless liquid.

Yield 47%.

<sup>1</sup>H-NMR (300 MHz; CDCl<sub>3</sub>):

δ: 3.3 (t, 2H), 1.6 (m, 2H), 1.45-1.2 (m, 12H), 0.9 (brt, 3H).

R,S-4-trimethylammonium-3-(nonylcaramoyl)-aminobutyrate

Nonyl isocyanate (15.42 g, 91.12 mmoles) was added to a  
5 solution of aminocarnitine, inner salt (7.3 g, 45.56 mmoles) in  
anhydrous DMSO (350 ml) and the solution was left to stand for 60  
hours at 40°C. The resulting mixture was transferred in a 3 l  
10 Erlenmeyer flask, containing ethyl ether (2.5 l) and the solvent was  
separated by decanting the formed precipitate, which was then  
transferred into a flask and precipitated again with ethyl ether. The  
so obtained crude product was washed several times with ethyl ether  
15 and purified on a silica gel chromatographic column, using a CHCl<sub>3</sub>:  
MeOH 9:1 to CHCl<sub>3</sub>: MeOH 3:7 gradient until elution of impurities  
with higher R<sub>f</sub>, then eluting the product of interest with MeOH only.  
15 9.7 g of pure product were obtained.

Yield 68%.

M.p.: 145-147°C.

<sup>1</sup>H-NMR (300 MHz; D<sub>2</sub>O):

δ: 4.4 (m, 1H), 3.45 (dd, 1H), 3.30 (d, 1H), 3.05 (s, 9H), 2.9 (t,  
20 2H), 2.3 (d, 2H), 1.3 (m, 2H), 1.15 (brs, 12H), 0.8 (brt, 3H).

FAB Mass=330, [(M+H)<sup>+</sup>].

### EXAMPLE 2

#### **R,S-4-quinuclidinium-3-(tetradecyloxycarbonyl)-oxybutyrate (ST 1265)**

10      ter-Butyl R,S-4-quinuclidinium-3-hydroxybutyrate iodide

Quinuclidine (2.40 g, 21.60 mmoles) was added to ter-Butyl  
R,S-4-iodo-3-hydroxybutyrate (6.18 g, 21.60 mmoles) in acetonitrile  
(60ml) and the solution was warmed to 60°C for 20 hours under  
stirring. After evaporation of the solvent, the residue was dissolved  
15      in acetonitrile and precipitated with ethyl ether several times to give  
7.2 g of product, contaminated with about 13% by weight of  
quinuclidine iodide (as from NMR). After repeated crystallization  
from CH<sub>3</sub>CN/Et<sub>2</sub>O, 4.3 g of pure product were obtained.

Yield 50%.

20      M.p.: 124-127°C.

<sup>1</sup>H-NMR (300 MHz; D<sub>2</sub>O):

$\delta$ : 4.50 (m, 1H), 3.40 (m, 2H), 2.42 (m, 2H), 2.08 (m, 1H), 1.88  
(m, 6H), 1.34 (m, 9H).

FAB Mass=270, [M<sup>+</sup>].

Elemental analysis: responding to the expected formula

K.F.=0.5% water.

The preparation of ter-butyl 4-iodo-3-hydroxybutyrate was carried  
5 out as described in J. Pharm. Science 64/7, 1262-1264, 1975.

Tetradecyl chloroformate

29 ml of a 20% toluene solution of phosgene (55.98 mmoles)  
was added to tetradecyl alcohol (4 g, 18.66 mmoles) and the reaction  
mixture was left to stand for 20 hours under stirring at room  
10 temperature. After solvent evaporation, the residue was taken up  
with hexane and evaporated to dryness (several times) to give 5.1 g  
product as colourless liquid.

Yield 98%.

<sup>1</sup>H-NMR (300 MHz; CDCl<sub>3</sub>):

15 δ: 4.30 (t, 2H), 1.72 (m, 2H), 1.30 (m, 22H), 0.85 (brt, 3H).

ter-butyl R,S-4-quinuclidinium-3-(tetradecyloxycarbonyl)-oxybutyrate chloride

Dimethylaminopyridine (922 mg, 755 mmoles) and tetradecyl  
chloroformate (2.09 g, 7.55 mmoles) were added to ter-butyl R,S-4-  
20 quinuclidinium-3-hydroxybutyrate (2 g, 5.03 mmoles) in anhydrous  
CH<sub>2</sub>Cl<sub>2</sub> (20ml). The solution was left to stand at room temperature  
for 20 hours under stirring. After this time, the solution was diluted  
with CHCl<sub>3</sub>, saturated with NaCl, and dried over anhydrous sodium  
sulfate. The dry residue obtained after evaporation was taken up

with ethyl ether and the undissolved residue was filtered off. After solvent evaporation a crude product was obtained. Flash-chromatography (CHCl<sub>3</sub>: MeOH 9:1) and elution with MeOH on Amberlyst A-21 resin (activated in HCl form), gave 1.6 g product as chloride.

5 Yield 58%.

M.p.: 59-60°C.

### EXAMPLE 5

**R,S-4-trimethylphosphonium-3-(nonylcarbamoyl)-oxybutyrate**

20 **(ST 1300)**

Ethyl ester of R,S-4-trimethylphosphonium-3-hydroxybutyric acid iodide

A 1M solution of trimethylphosphine in THF (93 ml) was added to ethyl R,S-4-iodo-3-hydroxybutyrate (20 g, 77.5 mmoles) and the

reaction mixture was left to stand at room temperature for 5 days under stirring. Ethyl ether was added, and the precipitate formed was separated by decantation. The precipitate was triturated with Et<sub>2</sub>O and dried under vacuum, giving 18.5 g product.

5 Yield 71.3%.

M.p.: 105-107°C.

<sup>1</sup>H-NMR (200 MHz; CDCl<sub>3</sub>):

δ: 4.6 (m, 1H), 4.15 (q, 2H), 3.1 (m, 1H), 2.75 (m, 3H), 2.2 (d, 9H), 1.3 (t, 3H).

10 The ethyl ester of R,S-4-trimethylphosphonium-3-hydroxybutyric acid was prepared as described in Tetrahedron 1990, 4277-4282, starting from R,S-3-hydroxy-4-butyrolactone.

Ethyl ester of R,S-4-trimethylphosphonium-3-(nonylcarbamoyl)-oxybutyric acid iodide

15 Nonyl isocyanate (4.04 g, 23.86 mmoles) was added to the ethyl ester of R,S-4-trimethylphosphonium-3-hydroxybutyric acid iodide (4 g, 11.97 mmoles) in anhydrous DMF (80 ml) and the solution was left to stand for 7 days at 110°C under stirring. CHCl<sub>3</sub> was added (300 ml) and the solution was washed with water and 20 dried over Na<sub>2</sub>SO<sub>4</sub>. The residue obtained after evaporation of the solvent was taken up with acetonitrile, the formed solid was filtered off and the filtrate was purified by silica gel flash-chromatography, using CHCl<sub>3</sub>: MeOH 8:2. 2.07 g of product in the form of a thick oil were obtained.

Yield 34.3%.

<sup>1</sup>H-NMR (200 MHz; CDCl<sub>3</sub>):

δ: 5.4 (m, 2H), 4.15 (q, 2H), 3.15 (m, 4H), 2.8 (d, 2H), 2.2 (d, 9H), 1.5 (m, 2H), 1.2 (brs, 12H), 0.8 (brt, 3H).

5 R,S-4-trimethylphosphonium-3-(nonylcarbamoyl)-oxybutyrate

Ethyl ester of R,S-4-trimethylphosphonium-3-(nonylcarbamoyl)-oxybutyric acid iodide (2.07 g, 4.11 mmoles) was dissolved into 1N HCl (200 ml) and the solution was warmed to 70°C for 3 hours. The residue obtained after solvent vacuum-evaporation 10 was taken up with MeOH and passed through Amberlyst A-21 resin, eluting with MeOH. A crude product was obtained, which was purified by flash-chromatography, eluting with MeOH and giving 700 mg product.

Yield: 49%.

15 M.p.: 123-127°C dec.

<sup>1</sup>H-NMR (300 MHz; D<sub>2</sub>O):

δ: 5.3 (m, 1H), 3.1 (m, 2H), 2.80-2.45 (m, 4H), 1.85 (d, 9H), 1.4 (m, 2H), 1.2 (brs, 12H), 0.8 (brt, 3H).

δ: 4.2-4.09 (dd, 2H), 4.0-3.85 (m, 1H), 3.62-3.40 (m, 4H), 2.70-2.50 (dd, 2H), 1.55-1.50 (m, 2H), 1.4-1.2 (m, 10H), 0.90-0.80 (t, 3H).

Elemental analysis: responding to the expected formula C<sub>14</sub>H<sub>27</sub>ClO<sub>3</sub>

10 Step C

5.2 g (0.08 moles) NaN<sub>3</sub> and a catalytic amount of tetrabutyl ammonium bromide were added to a solution of 11.4 g (0.041 moles) product obtained in the preceding step B. The reaction mixture was left for three nights at 60°C. The solution was vacuum-evaporated to dryness. A thick dark solution was obtained, which was purified on 15 silica gel chromatographic column, eluting with gradient from hexane alone to hexane/ethyl ether 95:5. The product was obtained with a 83% yield.

TLC silica gel hexane/ethyl ether 95:5;

20 Rf=0.23.

1H-NMR (300 MHz; CDCl<sub>3</sub>):

δ: 4.2-4.09 (dd, 2H), 4.0-3.80 (m, 1H), 3.60-3.40 (dd, 2H), 3.40-3.20 (dd, 2H), 2.70-2.40 (dd, 2H), 1.60-1.40 (m, 2H), 1.4-1.1 (m, 10H), 0.90-0.80 (t, 3H).

Elemental analysis: responding to the expected formula  
 $C_{14}H_{27}N_3O_3$

Step D

The product obtained in the preceding step C (15.39 g, 0.054  
5 moles) was dissolved in 31 ml of acetic acid and the resulting  
solution was subjected to catalytic hydrogenation with 10% Pd/C at  
60 psi for 7 hours. The reaction progress was checked by TLC, until  
disappearance of the starting product (hexane/ethyl ether 95:5).  
Thereafter, formaldehyde was added (4.6 ml, 0.167 moles) followed  
10 by 10% Pd/C and the mixture was hydrogenated at 30 psi for 2  
days. The catalyst was filtered off and the mixture was vacuum-  
dried. A pale yellow liquid was obtained, which was taken up with  
methylene chloride, washed with 1N NaOH, then water, then NaCl  
saturated solution; the organic phase was dried over anhydrous  
15 sodium sulfate, filtered and vacuum-evaporated to dryness. A thick  
oil was obtained. The product was obtained with a 98% yield.

TLC silica gel AcOEt/MeOH/NH<sub>3</sub> 90:10:3;

R<sub>f</sub>=0.42.

<sup>1</sup>H-NMR (300 MHz; CDCl<sub>3</sub>):

20 δ: 4.2-4.09 (dd, 2H), 3.85-3.80 (m, 1H), 3.60-3.40 (dd, 2H),  
2.65-2.40 (dd, 2H), 2.40-2.20 (dd, 2H), 2.20 (s, 6H), 1.60-1.40 (m,  
2H), 1.4-1.1 (m, 10H), 0.90-0.80 (t, 3H).

Elemental analysis: responding to the expected formula  
 $C_{16}H_{36}NO_3$

## Step E

The product obtained in the preceding step D (15.21 g, 0.053 moles) was dissolved in 98 ml THF and 8 ml methyl iodide were added thereto. The reaction progress was left overnight at room 5 temperature. The mixture was vacuum-evaporated to dryness. A thick oil was obtained. The product was obtained with a 98% yield.

TLC silica gel AcOEt/MeOH/NH<sub>3</sub> 90:10:3;

R<sub>f</sub>=0.10.

<sup>1</sup>H-NMR (300 MHz; CDCl<sub>3</sub>):

10 δ: 4.45-4.3 (m, 1H), 4.2-4.09 (dd, 2H), 3.75-3.30 (m, 2H), 3.5 (s, 9H), 2.75-2.60 (dd, 2H), 1.60-1.45 (m, 2H), 1.30-1.15 (m, 10H), 0.90-0.80 (t, 3H).

Elemental analysis: responding to the expected formula C<sub>16</sub>H<sub>39</sub>INO<sub>3</sub>

## 15 Step F

The product obtained in the preceding step E, was hydrolysed on Amberlyst IRA 402 resin (OH<sup>-</sup> activated form) eluting with water. Water was evaporated to dryness; the resulting solid was treated with isopropyl alcohol three times. A white solid was obtained.

20 Yield=93%

10

### Example 12

#### **R,S-3-quinuclidinium-2-(tetradecyloxycarbonyl)-oxy-1-propanephosphonate monobasic (ST 1260)**

##### Step A

In anhydrous environment, -70°C, a hexane solution of 1.6 M 15 BuLi (14 ml, 0.022 moles) was dropped into a solution of dibenzyl phosphite (5.8 g, 0.022 mmoles) in THF. After 15 minutes, 1.8 ml (0.022 moles) of epibromhydrine, dissolved in 5 ml THF, were added. After the addition, etherated BF<sub>3</sub> (3.6 ml, 0.022 moles) was dropped 20 very slowly. The reaction was left for further 3 hours at -70°C. A saturated ammonium chloride solution was added; then the temperature was left to raise to room temperature. This solution was extracted several times with AcOEt and the gathered organic phases were treated with saturated NaHCO<sub>3</sub>, and dried over anhydrous sodium sulfate, filtered and vacuum concentrated. An oil was

obtained, which after purification on silica gel chromatography (AcOEt/Hexane 1:1), gave 1.1 g of unreacted dibenzylphosphite and 5.3 g of product of interest.

Yield=60%.

5       TLC silica gel AcOEt/Hexane 7:3;

Rf=0.54.

10     Elemental analysis: responding to the expected formula

C<sub>17</sub>H<sub>20</sub>BrO<sub>4</sub>P.

MS-FAB+glycerol matrix=399, 400, 401, 402.

### Step B

2 g (5 mmoles) of the compound obtained in step A were dissolved at 10% concentration and the solution cooled down to 0°C. 15 1.4 ml TEA (10 mmoles) and 0.62 g (5 mmoles) DMAP (dimethylaminopyridine) were dropped thereto. Immediately after, 5.2 mmoles tetradecyl chloroformate were added and the temperature was left to raise to room temperature. The reaction 20 progress was checked on TLC and worked up at the disappearance of the starting compound. Further chloroform was added and the reaction mixture was washed with 1N HCl and water. After drying over anhydrous sodium sulfate, the solvent was evaporated off and an oil was obtained, which was purified through flash-

chromatography using hexane/AcOEt 7:3 as eluant. The product was obtained.

Yield: 75%.

TLC silica gel hexane/AcOEt 7:3;

5 Rf=0.31.

<sup>1</sup>H-NMR (300 MHz; CDCl<sub>3</sub>):

10 Elemental analysis: responding to the expected formula C<sub>32</sub>H<sub>48</sub>BrO<sub>6</sub>P.

#### Step D

The product obtained in step B (6.39 g, 10 mmoles) was dissolved in 12 ml DMF, then quinuclidine was added (2.2 g, 20 mmoles) together with TBAI (tetrabutyl ammonium iodide) in catalytic amounts (1% by weight with respect to the substrate). The reaction was carried out at a temperature of 50°C, until the starting product disappeared. At the end of reaction, the mixture was concentrated under high vacuum, obtaining a semisolid containing the product. The latter was purified through silica gel flash-chromatography, using CHCl<sub>3</sub>/MeOH 8:3. The product was obtained.

Yield=15%.

TLC      silica      gel      CHCl<sub>3</sub>:iPrOH:MeOH:H<sub>2</sub>O:CH<sub>3</sub>COOH  
(42:7:28:10.5:10.5)/acetone 8:2;

5 **Example 14**

**R,S-3-pyridinium-2-(nonylaminocarbonyl)-oxy-1-propanephosphonic acid chloride (ST 1268)**

Step A

The product was prepared as disclosed in step A of Example  
10 12.

Step C

The product was prepared as disclosed in step C of Example  
13.

Step H

15 The compound obtained in the preceding step (5.68 g, 10  
mmoles) was dissolved in anhydrous pyridine (50% solution),  
together with TBAI (tetrabutyl ammonium iodide) in catalytic  
amounts (1% w/w with respect to the substrate). The reaction was  
carried out at 50°C, until the starting compound disappeared. At the  
20 end of the reaction, the solution was high vacuum-concentrated,  
obtaining a semisolid, containing the product, which was isolated  
and purified through silica gel flash-chromatography using a  
gradient from CH<sub>2</sub>Cl<sub>2</sub> only to CH<sub>2</sub>Cl<sub>2</sub>:MeOH from 9:1 to 1:1.

Yield: 20%.

TLC      silica      gel      CHCl<sub>3</sub>:iPrOH:MeOH:H<sub>2</sub>O:CH<sub>3</sub>COOH  
(42:7:28:10.5:10.5)/acetone 8:2;

R<sub>f</sub>=0.73.

<sup>1</sup>H-NMR (300 MHz; CDCl<sub>3</sub>):

δ: 9.4-9.3 (d, 2H), 8.2-8.1 (t, 1H), 7.9-7.8 (t, 2H), 7.3-7.1 (m, 5H), 5.3-5.1 (m, 3H), 4.9-4.8 (m, 2H), 3.0-2.9 (m, 2H), 2.2-1.6 (m, 2H), 1.4-1.2 (m, 2H), 1.3-1.1 (m, 12H), 0.9-0.7 (t, 3H).

Elemental analysis: responding to the expected formula C<sub>24</sub>H<sub>38</sub>N<sub>2</sub>O<sub>5</sub>P.

MS-FAB+glycerol matrix=477.

#### Step I

The product obtained in step H (4.76 g, 10 mmoles) was dissolved in 100 ml CH<sub>2</sub>Cl<sub>2</sub> and 20 mmoles TMSI (trimethylsilyl iodide) were added to the resulting solution. After 30 minutes, the reaction was finished; 0.5 ml water were added to the mixture, which was concentrated to dryness. The final product was purified and isolated by RP-18 silica gel chromatography, using a gradient water/methanol 9:1 to methanol 100%. The solid was dissolved in water and passed through IRA 402 resin (Cl<sup>-</sup> activated). ST 1268 was obtained.

Yield=80%.

M.p.=202-204°C.

TLC      silica      gel      CHCl<sub>3</sub>:iPrOH:MeOH:H<sub>2</sub>O:CH<sub>3</sub>COOH

### Example 22

**Isobutyl R,S-4-trimethylammonium-3-tetradecylamino-aminobutyrate (ST 1252)**

R,S-4-trimethylammonium-3-tetradecylamino-aminobutyrate

15 isobutyl ester acetate

Isobutyl ester of racemic aminocarnitine (5 g, 0.0198 moles) and tetradecanal (4.6 g, 0.0217 moles) were dissolved into 250 ml methanol. Glacial acetic acid (1.13 ml, 0.198 moles) and 1 g 10% Pd/C were added. The mixture was hydrogenated at 30 psi  
20 overnight. After filtration on celite, the solution was vacuum-concentrated. A pale yellow oil was obtained, which was purified through a silica gel column, eluting firstly with AcOEt, then AcOEt/MeOH 9:1. 4g of product were obtained.

Yield= 47%;

TLC silica gel (CHCl<sub>3</sub> 42/MeOH 28/isopropyl alcohol 7/water 10.5/ acetic acid 10.5)/methyl acetate 7:3

Rf=0.74.

<sup>1</sup>H-NMR (300 MHz; CD<sub>3</sub>OD):

δ: 3.92-3.90 (d, 2H), 3.64-3.58 (m, 1H), 3.50-3.30 (m, 2H), 2.80-2.50 (m, 4H), 2.0-1.9 (m, 1H), 2.6-2.4 (m, 2H), 1.3 (s, 22H), 0.98-0.82 (m, 9H).

R,S-4-trimethylammonium-3-tetradecylamino-aminobutyrate

The isobutyl ester of R,S-4-trimethylammonium-3-tetradecylamino-aminobutyric acid, acetate salt, (3.3 g) was hydrolysed on Amberlyst IRA 402 resin (OH<sup>-</sup> activated form) and eluted with water. Water was evaporated to dryness under reduced pressure; the resulting white solid was washed with methanol, filtered and vacuum-dried. 1.95 g of product were obtained.

15 Yield 70%

**R,S-4-trimethylammonium-3-octylaminobutyrate (ST 1254)**

R,S-4-trimethylammonium-3-octylamino-aminobutyrate isobutyl 10 ester acetate

Isobutyl ester of racemic aminocarnitine chloride, (5 g, 0.0198 moles) and octanaldehyde (2.79 g, 0.0217 moles) were dissolved into 250 ml methanol. Glacial acetic acid (1.13 ml, 0.198 moles) and 1 g 10% Pd/C were added. The mixture was hydrogenated at 30 psi overnight. After filtration on celite, the solution was vacuum-concentrated. 8.5 g product were obtained, subsequently purified through a silica gel column, eluting firstly with AcOEt, then AcOEt/MeOH (9:1; 8.5:1.5). 3g of product were obtained.

**R-4-trimethylammonium-3-(10-  
phenoxydecylcarbamoyl)aminobutyrate (ST 1449)**

**10-Phenoxydecyl isocyanate**

A solution of 11-phenoxyundecanoyl chloride (31.1 g, 104.8  
15 mmoles) in acetone (30 ml) was dropped into a solution of sodium  
azide (9.53 g, 146.6 mmoles) in water (30 ml), cooled in an ice bath,  
keeping the solution temperature between 10 and 15°C. After one  
hour, the solution was transferred in a separatory funnel and the  
lower phase (the aqueous one) was eliminated. The higher phase was  
20 transferred into a flask containing 100 ml of toluene, previously  
warmed at 65°C. After 1.5 hours, the solution was evaporated to  
dryness, giving 13.37 g of crude product, which could be used as  
such in the subsequent reaction.

$^1H$ -NMR (300 MHz;  $CDCl_3$ ):

## PHARMACOLOGICAL ACTIVITY

### Determination of CPT inhibiting activity.

CPT inhibition was evaluated essentially as described in Kerner, J. & Bieber, L.L. (1990) Biochemistry 29: 4326-34 on fresh

mitochondrial preparations obtained from normally fed Fischer rat liver or heart. Mitochondria were isolated from liver or heart and suspended in 75 mM saccharose buffer, 1 mM EGTA, pH 7.5. 100  $\mu$ l mitochondrial suspension, containing 50  $\mu$ M [ $^{14}$ C] palmitoyl-CoA (specific activity 10,000 DPM/mole) and 10 mM L-carnitine, were incubated at 37°C, in the presence of scalar concentrations of the test product (0-3 mM). Reaction time: 1 minute.

Table 1 shows the IC<sub>50</sub> determined.

The compounds of the present invention have higher inhibiting activity than the one of the reference compound SDZ-CPI-975, Example 1, disclosed in EP 0 574 355.

**TABLE 1**  
**IC<sub>50</sub> of inhibition CPT1 curve in rat liver mitochondria**

Compound	IC <sub>50</sub> ( $\mu$ M/I)

Determination of oleate-stimulated  $\beta$ -hydroxybutyrate production

$\beta$ -hydroxybutyrate production is an index of CPT activity. In fact, the production of ketone bodies, final products of mitochondrial  $\beta$ -oxidation, is related to CPT activity.

Mitochondrial preparations, obtained according to the method by Venerando et al. (Am. J. Physiol. 266:C455-C461, 1994), were used. Hepatocytes are incubated at 37°C in KRB bicarbonate buffer at pH 7.4, 6 mM glucose, 1% BSA in O<sub>2</sub>/CO<sub>2</sub> 95/5 atmosphere at 5 2.5x10<sup>6</sup> cells/ml. After 40 min incubation with the test compound at different concentrations, the first set of samples was taken (T <sub>0 min</sub>) and oleate was added (1 mM final in KRB+BSA 1.4%). After 20 minutes, the second withdrawal was made (T <sub>20 min</sub>).

Table 2 shows the results. The data are the mean of three 10 different experiments, twice carried out.

The compounds of the present invention have higher β-hydroxybutyrate inhibiting activity than the one of the reference compound SDZ-CPI-975, Example 1, disclosed in EP 0 574 355.

Glucose and  $\beta$ -hydroxybutyrate in serum fasted rats treated with CPT inhibitors

Normally fed Fischer rats were starved for 24 hours and subsequently treated with the test compounds. One hour after the treatment, the animals were sacrificed and serum concentrations of glucose and  $\beta$ -hydroxybutyrate were determined.

Table 3 shows the results. For the compound ST1326 were used doses of 14.5 mg/2 ml/kg, for other test compounds, the doses are equivalent to ST1326 one.

10

Glucose and insulin levels in diabetic animals treated with CPT inhibitors

C57BL/6J male rats, 5-weeks old, were provided by Ch. River. After 10 days of acclimatisation in standard conditions (22 ± 2 °C; 5 55 ± 15% humidity; 15 - 20/h air changes; 12 hours light-dark cycle, with 700 - 1900 lux) and with standard diet with 4RF21 feedstock (Mucedola), glycaemia was controlled in post-absorption state (starving from 8.30 a.m. to 4.30 p.m.). Blood withdrawal was carried out cutting the tail end. Glucose was analysed in blood acid 10 supernatant (HClO<sub>4</sub> 0,375 N) with autoanalyzer Cobas Mira S with Glucose GDH Kit (Roche).

The animals were divided in two groups, 26 mice each and fed with a high-fat and a low-fat diet, respectively.

After 2 months from the start of the diet, glycaemia was tested, 15 according to the starting method. After about 3 months from the start of the diet, glycaemia was tested, according to the starting method and plasma insulin levels were also determined (with blood withdrawal from end tail cutting) using [<sup>125</sup>I] Rat Insulin Kit (Amersham).

20 One 10 mice group fed with low-fat diet and two 10-mice groups fed with high -fat diet were selected One of the two high fat diet was administered with ST 1327 at the dose of 45 mg/Kg in deionised H<sub>2</sub>O (p.o., twice a day, 8.30 a.m. and 5.30 p.m.).administration volume was 10 ml/Kg. the two remaining

groups was treated with vehicle only. High-fat or low-fat diets were continued during the treatment.

After 20 days of treatment, glycaemia and plasma insulin were measured. After 43 days of treatment, the animals were sacrificed by decapitation in post-absorption state (fasting 8.30 a.m.-4.30 p.m.), 8 hours after the last treatment. Blood was withdrawn and serum was separated by centrifugation and stored at - 80 °C. Liver, heart and skeletal muscle (upper limbs) were also extracted, frozen in dry ice-acetone and kept at - 80 °C.

High-fat diet determined an increase of body weight, glycaemia and insulin, with respect to low-fat diet.

After 20 days of treatment with ST 1327, glucose and insulin levels significantly decreased.

Table 4 shows the results.

**TABLE 4**

**Glucose and insulin levels in rats fed with fat-rich diet.**

Compound	High Fat diet Control	High Fat diet Treated	Low fat diet Control
Glucose mg/dl	248.5±11.03 (10)	181.4±9.63* (9)	207.3±6.84** (9)
Insulin ng/ml	1.632±0.246 (10)	0.621±0.117** (9)	0.549±0.050* (9)

Student's t test, \* and \*\* indicate  $p < 0.001$  and  $p < 0.01$ , respectively, against high fat diet; () indicates the number of cases.

These results shows that the compounds according to the 5 present invention are effective in controlling glycaemia in fasting conditions. This is an important aspect in the treatment of diabetes, wherein hepatic gluconeogenesis occurs during fasting periods (i.e. nocturnal rest).

The effect of CPT inhibitors on myocardial ischemia

10 The compounds of the present invention are also effective in the treatment of ischemia, in particular myocardial ischemia.

To this end, male Wistar rats, weighing 200-225 g, provided by Charles-River, were kept at constant temperature of  $23^{\circ} +/ - 1^{\circ}\text{C}$ , 15 50+/- 10% relative humidity, 12 hours light-dark cycle, fed with pellet 4RF21 (Mucedola) tap water ad libitum.

The animals were anaesthetised with sodium Pentobarbital at the dose of 70 mg/Kg i.p.. Hearts were rapidly removed and put in a cold Krebs-Henseleit solution, before incannulation of aorta e 20 subsequent perfusion according to Langendorff technique at  $37^{\circ}\text{C}$  with a pressure of 100 cm water.

Perfusion medium (Krebs-Henseleit) at pH 7.4 consists in: 128 mM NaCl, 4.7 mM KCl, 1 mM MgCl<sub>2</sub>, 0.4 mM Na<sub>2</sub>HPO<sub>4</sub>, 20.2 mM NaHCO<sub>3</sub>, 1.3 mM CaCl<sub>2</sub>, 5 mM glucose. The medium was constantly oxygenated with carbogen (95% O<sub>2</sub>, 5% CO<sub>2</sub>).

After a 10 min "conditioning" period, hearts were perfused in a recirculant apparatus for 20 min. with the same medium containing 0.6 mM palmitate complexed with albumine (fraction V, fatty acid free), with or without the CPT inhibitor according to the present invention. By way of example ST 1364 was used at concentrations of 1 and 5  $\mu$ M. After such a period ischemia was induced by reducing perfusion hydrostatic pressure from 100 cm to 20 cm for a period of 30 min.. Reperfusion was started re-establishing the starting pressure conditions (100 cm).Hearts were controlled for 20 min.. the inhibitor is present also during reperfusion phase.

Lactate dehydrogenases (LDH) release was monitored in the effluent in normal oxygenation conditions, during ischemia, with a withdrawal of medium at 30', and during reperfusion, with withdrawals at 1.5, 10, 15 and 20 minutes.

LDH release in the effluent is remarkably reduced, during reperfusion results significantly reduced in the presence of ST1364 at the dose of 5  $\mu$ M (fig. 1). This result indicates a lower entity of cellular damage from reperfusion of the treated with respect to the controls.

Statistical analysis was carried out with Student's "t" test for non-paired data.

The number of the cases for each group is six (n=6).

The following Table 5 reports the results.

TABLE 5

**LDH release in perfusate (mU/ml/min)**

	Control	ST1364 1 µM *	ST1364 5µM **
Basal	280	275	220
Ischemia 30'	200	220	200
Reperfusion 1'	640	480	410
Reperfusion 5'	660	500	380
Reperfusion 10'	670	495	380
Reperfusion 15'	700	510	320
Reperfusion 20'	720	580	325

Statistical analysis was carried out with Student's "t" test for non-paired data. \* p< 0.05 vs controls; \*\*p<0.01 vs controls.

5 The number of the cases for each group is six (n=6).

LDH release in the effluent is remarkably reduced, during reperfusion results significantly reduced in the presence of ST1364 at the dose of 5 µM (fig. 1). This result indicates a lower entity of cellular damage from reperfusion of the treated with respect to the 10 controls.

In another aspect, the present invention provides a combination of at least a compound of formula (I) with at least another active ingredient suitable for the treatment of the disease of interest.

15 In the treatment or prevention of diabetes, the present invention provides a compound of formula (I), optionally in combination with a suitable well-known active ingredient, such as for example a sulfonylurea, L-carnitine, fibrate and other agonists of

peroxisomal proliferator activated receptor (PPAR- $\alpha$ ), agonists of 9-cis retinoic acid activated receptor, such as RXR, in particular  $\alpha$ -,  $\beta$ - and  $\gamma$ -isoforms, HMG-CoA reductase inhibitor,  $\beta$ -sitosterol inhibitor, cholesterol acyltransferase inhibitor, biguanides, cholestyramine, 5 angiotensin II antagonist, melinamide, nicotinic acid, fibrinogen receptor antagonists, aspirin,  $\alpha$ -glucosidase inhibitors, insulin secretagogue, insulin and glucagon-like peptides (incretins) and agonists of PPAR- $\gamma$  (such as thiazolidinediones or others).

In the treatment or prevention of obesity, the present invention 10 provides a compound of formula (I), optionally in combination with an suitable well-known active ingredient, such as for example fenfluramine, dexfenfluramine, phentiramine, a  $\beta$ -3-adrenergic receptor agonist.

In the treatment or prevention of high triglyceridemia, the 15 present invention provides a compound of formula (I), optionally in combination with an suitable well-known active ingredient.

The compounds according to the present invention are also useful in the treatment or prevention of high cholesterol levels and in modulating HDL plasma levels, thus resulting beneficial in the 20 treatment or prevention of the diseases related with these altered plasma levels. Examples of related diseases are hypertension, obesity, atherosclerosis, diabetes and related conditions. The medicaments containing at least a compound of the present invention may contain in combination at least another active

ingredient effective in the treatment or prevention of the above mentioned diseases. Examples of other active ingredient are fibrates, such as clofibrate, bezafibrate and gemfibrozil and other PPAR- $\alpha$  agonists; inhibitors of cholesterol biosynthesis, such as HMG-CoA reductase inhibitors, such as statins, namely lovastatin, simvastatin and pravastatin; inhibitors of cholesterol absorption for example beta-sitosterol and (acyl CoA:cholesterol acyltransferase) inhibitors for example melinamide; anion exchange resins for example cholestyramine, colestipol or a dialkylaminoalkyl derivatives of a cross-linked dextran; nicotinyl alcohol, nicotinic acid or a salt thereof; vitamin E; thyromimetics and L-carnitine.

The compounds of the present invention may be orally administered in the form of a pharmaceutical composition, comprising a therapeutically effective amount of at least a compound of formula (I) in admixture with a pharmaceutically acceptable vehicle and/or excipient. Examples of oral pharmaceutical compositions are hard or soft capsules, tablets, including sublingual administration, ampoules, sachets, elixirs, suspensions, syrups, and the like. Alternatively, the active ingredients according to the present invention may be incorporated directly with the food of the diet. The amount of active compound in such therapeutically useful compositions is such that an effective dosage will be obtained. The active compounds can also be administered intranasally as, for example, liquid drops or spray.

The tablets, pills, capsules, and the like may also contain a binder such as gum tragacanth, acacia, corn starch or gelatin; excipients such as dicalcium phosphate; a disintegrating agent such as corn starch, potato starch, alginic acid; a lubricant such as 5 magnesium stearate; and a sweetening agent such as sucrose, lactose or saccharin. When a dosage unit form is a capsule, it may contain, in addition to materials of the above type, a liquid carrier such as a fatty oil.

Various other materials may be present as coatings or to 10 modify the physical form of the dosage unit. For instance, tablets may be coated with shellac, sugar or both. A syrup or elixir may contain, in addition to the active ingredient, sucrose as a sweetening agent, methyl and propylparabens as preservatives, a dye and a flavoring such as cherry or orange flavor.

15 These active compounds may also be administered parenterally. Solutions or suspensions of these active compounds can be prepared in pyrogen-free water.

The pharmaceutical forms suitable for injectable use include 20 sterile aqueous solutions or dispersions and sterile powders for the extemporaneous preparation of sterile injectable solutions or dispersions.

If desired, or deemed necessary, the pharmaceutical compositions may be in the controlled-release form. Various techniques for preparing these forms are known.

General reference for pharmaceutical compositions can be made to "Remington's Pharmaceutical Sciences Handbook", Mack Pub. N.Y. USA.

The effective dosage of active ingredient employed may vary 5 depending on the particular compound employed, the mode of administration, the condition being treated and the severity of the condition being treated.

The compositions are formulated and administered in the same general manner as detailed below. The compounds of the present 10 invention can be used effectively alone or in combination with one or more additional active agents depending on the desired target therapy. Combination therapy includes administration of a single pharmaceutical dosage formulation which contains a compound of formula I and one or more additional active agents, as well as 15 administration of a compound of formula I and each active agent in its own separate pharmaceutical dosage formulation. For example, a compound of formula I and an HMG-CoA reductase inhibitor can be administered to the patient together in a single oral dosage composition such as a tablet or capsule, or each agent administered 20 in separate oral dosage formulations. Where separate dosage formulations are used, a compound of formula I and one or more additional active agents can be administered at essentially the same time, i.e., concurrently, or sequentially; combination therapy is understood to include all these regimens.

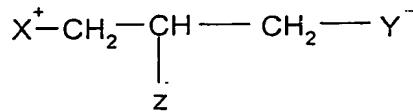

An example of combination treatment or prevention of atherosclerosis is wherein a compound of formula I is administered in combination with one or more of the following active agents: an antihyperlipidemic agent; a plasma HDL-raising agent; an 5 antihypercholesterolemic agent such as a cholesterol biosynthesis inhibitor, for example an HMG-CoA reductase inhibitor, an HMG-CoA synthase inhibitor, a squalene epoxidase inhibitor, or a squalene synthetase inhibitor (also known as squalene synthase inhibitor); an acyl-coenzyme A: cholesterol acyltransferase (ACAT) 10 inhibitor such as melinamide; probucol; nicotinic acid and the salts thereof and niacinamide; a cholesterol absorption inhibitor such as beta-sitosterol; a bile acid sequestrant anion exchange resin such as cholestyramine, colestipol or dialkylaminoalkyl derivatives of a cross-linked dextran; an LDL (low density lipoprotein) receptor 15 inducer; fibrates such as clofibrate, bezafibrate, fenofibrate, and gemfibrozil and other PPAR- $\alpha$  agonists, L-carnitine; vitamin B<sub>6</sub> and the pharmaceutically acceptable salts thereof; vitamin B<sub>12</sub>; anti-oxidant vitamins such as vitamin C and E and beta carotene; a beta-blocker; an angiotensin II antagonist; an angiotensin converting 20 enzyme inhibitor; and a platelet aggregation inhibitor such as fibrinogen receptor antagonists (i.e., glycoprotein IIb/IIIa fibrinogen receptor antagonists) and aspirin. The compounds of formula I can be administered in combination with more than one additional active agent.

Another example of combination therapy can be seen in treating obesity or obesity-related disorders, wherein the compounds of formula I may be effectively used in combination with for example, fenfluramine, dexfenfluramine, phentiramine and  $\beta$ -3 adrenergic 5 receptor agonist agents and L-carnitine.

Another example of combination therapy can be seen in treating diabetes and related disorders wherein the compounds of formula I can be effectively used in combination with for example sulfonylureas, biguanides,  $\alpha$ -glucosidase inhibitors, other insulin 10 secretagogues, insulin and glucagon-like peptides (incretins) and agonists of PPAR- $\gamma$  (such as thiazolidinediones or others) as well as the active agents discussed above for treating atherosclerosis.

**CLAIMS**

## 1) Compounds of formula (I)

wherein:  $X^+$  is selected from the group consisting of  $\text{N}^+(\text{R}_1, \text{R}_2, \text{R}_3)$  and  $\text{P}^+(\text{R}_1, \text{R}_2, \text{R}_3)$ ,

5       wherein  $(\text{R}_1, \text{R}_2, \text{R}_3)$ , being the same or different, are selected in the group consisting of hydrogen and  $\text{C}_1\text{-C}_9$  straight or branched alkyl groups,  $-\text{CH}=\text{NH}(\text{NH}_2)$ ,  $-\text{NH}_2$ ,  $-\text{OH}$ ; or two or more  $\text{R}_1$ ,  $\text{R}_2$  and  $\text{R}_3$ , together with the nitrogen atom, which they are linked to, form a saturated or unsaturated, monocyclic or bicyclic heterocyclic system; with the proviso that at least one of the  $\text{R}_1$ ,  $\text{R}_2$  and  $\text{R}_3$  is 10 different from hydrogen;

$\text{Z}$  is selected from

- $\text{OR}_4$ ,

- $\text{OCOOR}_4$ ,

15       - $\text{OCONHR}_4$ ,

- $\text{OCSNHR}_4$ ,

- $\text{OCSOR}_4$ ,

- $\text{NHR}_4$ ,

- $\text{NHCOR}_4$ ,

20       - $\text{NHCSR}_4$ ,

- $\text{NHCOOR}_4$ ,

- $\text{NHCSOR}_4$ ,

-NHCONHR<sub>4</sub>,

-NHCSNHR<sub>4</sub>,

-NHSOR<sub>4</sub>,

-NHSONHR<sub>4</sub>,

5 -NHSO<sub>2</sub>R<sub>4</sub>,

-NHSO<sub>2</sub>NHR<sub>4</sub>,

-SR<sub>4</sub>,

wherein -R<sub>4</sub> is a C<sub>1</sub>-C<sub>20</sub> saturated or unsaturated, straight or branched alkyl group, optionally substituted with a A<sub>1</sub> group,

10 wherein A<sub>1</sub> is selected from the group consisting of halogen atom, aryl, heteroaryl, aryloxy or heteroaryloxy group, said aryl, heteroaryl, aryloxy or heteroaryloxy groups being optionally substituted with one or more C<sub>1</sub>-C<sub>20</sub> saturated or unsaturated, straight or branched alkyl or alkoxy group and/or halogen atom;

15 Y<sup>-</sup> is selected from the group consisting of -COO<sup>-</sup>, PO<sub>3</sub>H<sup>-</sup>, -OPO<sub>3</sub>H<sup>-</sup>, tetrazolate-5-yl;

with the proviso that when Z is -NHCOR<sub>4</sub>, X<sup>+</sup> is trimethylammonium, Y<sup>-</sup> is -COO<sup>-</sup>, then R<sub>4</sub> is C<sub>20</sub> alkyl;

with the proviso that when Z is -NHSO<sub>2</sub>R<sub>4</sub>, X<sup>+</sup> is trimethylammonium and Y<sup>-</sup> is -COO<sup>-</sup>, then R<sub>4</sub> is not tolyl;

20 with the proviso that when Z is -NHR<sub>4</sub>, X<sup>+</sup> is trimethylammonium and Y<sup>-</sup> is -COO<sup>-</sup>, then R<sub>4</sub> is not C<sub>1</sub>-C<sub>6</sub> alkyl.

their (R,S) racemic mixtures, their single R or S enantiomers, their pharmaceutically acceptable salts.

- 2) Compounds according to claim 1, wherein R<sub>1</sub>, R<sub>2</sub> and R<sub>3</sub> are methyl.
- 3) Compounds according to claim 1, wherein the heterocyclic system formed by R<sub>1</sub>, R<sub>2</sub> and R<sub>3</sub> together with nitrogen is selected from the group consisting of morpholinium, quinuclidinium, pyridinium, quinolinium and pyrrolidinium.
- 4) Compounds according to claim 1, wherein R<sub>1</sub> and R<sub>2</sub> are H, R<sub>3</sub> is selected from the group consisting of -CH=NH(NH<sub>2</sub>), - NH<sub>2</sub> and - OH.
- 5) Compounds according to any one of claims 1-4, wherein Z is selected from the group consisting of ureido (-NHCONHR<sub>4</sub>) or carbamate (-OCONHR<sub>4</sub>, -NHCOOR<sub>4</sub>), R<sub>4</sub> is a C<sub>7</sub>-C<sub>20</sub> saturated or unsaturated, straight or branched alkyl group.
- 6) Compounds according to claim 5, wherein R<sub>4</sub> is a C<sub>9</sub>-C<sub>18</sub> saturated or unsaturated, straight or branched alkyl group.
- 7) Compounds according to claim 1, selected from the group consisting of  
R,S-4-trimethylammonium-3-(nonylcarbamoyl)-aminobutyrate;  
R,S-4-quinuclidinium-3-(tetradecyloxycarbonyl)-oxybutyrate;  
R,S-4-trimethylammonium-3-(nonylcarbamoyl)-oxybutyrate;  
R,S-4-trimethylammonium-3-(nonyloxycarbonyl)-oxybutyric acid chloride;  
R,S-4-trimethylphosphonium-3-(nonylcarbamoyl)-oxybutyrate;  
R,S-4-trimethylammonium-3-(octyloxycarbonyl)-aminobutyrate;

R,S-4-trimethylammonium-3-(nonyloxycarbonyl)-aminobutyrate;

R,S-4-trimethylammonium-3-octyloxybutyrate;

R,S-4-trimethylammonium-3-tetradecyloxybutyrate;

R,S-1-guanidinium-2-tetradecyloxy-3-(tetrazolate-5-yl)-propane;

5 R,S-1-trimethylammonium-2-tetradecyloxy-3-(tetrazolate-5-yl)-propane;

R,S-3-quinuclidium-2-(tetradecyloxycarbonyl)-oxy-1-propanephosphonate monobasic;

R,S-3-trimethylammonium-2-(nonylaminocarbonyl)-oxy-1-10 propanephosphonate monobasic;

R,S-3-pyridinium-2-(nonylaminocarbonyl)-oxy-1-propanephosphonic acid chloride;

R-4-trimethylammonium-3-(tetradecylcarbamoyl)-aminobutyrate;

R-4-trimethylammonium-3-(undecylcarbamoyl)-aminobutyrate;

15 R-4-trimethylammonium-3-(heptylcarbamoyl)-aminobutyrate;

R,S-4-trimethylammonium-3-(nonylthiocarbamoyl)-aminobutyrate;

R-4-trimethylammonium-3-(nonylcarbamoyl)-aminobutyrate;

S-4-trimethylammonium-3-(nonylcarbamoyl)-aminobutyrate;

20 S-4-trimethylammonium-3-(tetradecylcarbamoyl)-aminobutyrate;

R,S-4-trimethylammonium-3-tetradecylaminobutyrate;

R,S-4-trimethylammonium-3-octylaminobutyrate;

R,S-4-trimethylammonium-3-(decansulfonyl)aminobutyrate;

R,S-4-trimethylammonium-3-(nonylsulfamoyl)aminobutyrate;

- S-4-trimethylammonium-3-(dodecansulfonyl)aminobutyrate;
- R-4-trimethylammonium-3-(dodecansulfonyl)aminobutyrate;
- S-4-trimethylammonium-3-(undecylsulfamoyl)aminobutyrate;
- R-4-trimethylammonium-3-(undecylsulfamoyl)aminobutyrate;
- 5 R-4-trimethylammonium-3-(dodecylcarbamoyl)aminobutyrate;
- R-4-trimethylammonium-3-(10-
- phenoxydecylcarbamoyl)aminobutyrate;
- R-4-trimethylammonium-3-(*trans*- $\beta$ -
- styrenesulfonyl)aminobutyrate.
- 10 8) A process for the preparation of compounds of claim 1, wherein Z is carbonate (-OCOOR<sub>4</sub>), carbamate (-NHCOOR<sub>4</sub>, -OCONHR<sub>4</sub>), thiocarbamate (-OCSNHR<sub>4</sub>, -NHCSOR<sub>4</sub>) or thiocarbonate (-OCSOR<sub>4</sub>), comprising the reaction of X<sup>+</sup>-CH<sub>2</sub>-CH(OH)-CH<sub>2</sub>-Y<sup>-</sup>, wherein X<sup>+</sup> and Y<sup>-</sup> have the same meanings as in claim 1, of the desired structure, optionally protected on the acid Y<sup>-</sup> group, respectively with alkyl chloroformates, alkyl isocyanates, alkyl isothiocyanates, alkyl thiochloroformates, wherein the alkyl moiety is the desired R<sub>4</sub> alkyl group.
- 15 9) A process for the preparation of the compounds of claim 1, wherein Z is amide (-NHCOR<sub>4</sub>), thioamide (-NHCSR<sub>4</sub>), carbamate (-NHCOOR<sub>4</sub>, -OCONHR<sub>4</sub>), thiocarbamate (-NHCSOR<sub>4</sub>, -OCSNHR<sub>4</sub>), ureido (-NHCONHR<sub>4</sub>), thioureido (-NHCSNHR<sub>4</sub>), sulfonamide (-NHSOR<sub>4</sub>), sulfonamide (-NHSO<sub>2</sub>R<sub>4</sub>), sulfamoylamino (-NHSO<sub>2</sub>NHR<sub>4</sub>), and sulfamide (-NHSO<sub>2</sub>NHR<sub>4</sub>), comprising the

reaction of  $X^+-CH_2-CH(NH_2)-CH_2-Y^-$ , wherein  $X^+$  and  $Y^-$  have the same meanings as in claim 1, of the desired structure, optionally protected on the acid  $Y^-$  group, respectively with acyl chlorides, thioacyl chlorides, alkyl chloroformates, alkyl thiochloroformates, alkyl isocyanates, alkyl thioisocyanates, alkyl sulfinyl chlorides, alkyl sulfonyl chlorides,  $SOCl_2$  and alkyl amines, alkyl sulfamoyl chlorides (or  $SO_2Cl_2$  and alkyl amines), wherein the alkyl moiety is the desired  $R_4$  alkyl group.

- 10) A process for the preparation of the compounds of claim 1,  
10 wherein  $Z$  is  $-OR_4$  or  $-SR_4$  comprising
- the reaction of carbonyl compounds of formula  $Hal-CH_2-CO-CH_2-COOR'$ , wherein  $Hal$  is a halogen atom and  $R'$  is the residue of a suitable ester, with respectively alcohols and thiols  $R_4OH$  or  $R_4SH$ , wherein  $R_4$  is as defined in claim 1, to give the respective ketal or thioketal;
  - transformation of the the respective ketal or thioketal into the respective ether or thioether;
  - substitution of the  $Hal$  atom with a nucleophilic group, and
  - transformation of the nucleophilic group into the  $X^+$  group,  
20 wherein  $X^+$  is  $N^+(R_1, R_2, R_3)$  or, alternatively
  - step b) is followed by the substitution of the  $Hal$  atom with a  $(R_1, R_2, R_3)$ -substituted phosphine to obtain the compounds of formula (I) wherein  $X^+$  is  $P^+(R_1, R_2, R_3)$ .

- 11) A process for the preparation of the compounds of claim 1, wherein Z is  $-\text{NHR}_4^+$  comprising the reaction of  $\text{X}^+-\text{CH}_2-\text{CH}(\text{NH}_2)-\text{CH}_2-\text{Y}^-$ , wherein  $\text{X}^+$  and  $\text{Y}^-$  have the same meanings as in claim 1, of the desired structure, optionally protected on the acid  $\text{Y}^-$  group, with alkane carbaldheydes, wherein the alkyl moiety is a one-term lower homologue of the desired  $\text{R}_4^+$ , and subsequent reduction.
- 12) Compounds according to claims 1-7, for use as medicaments.
- 13) Pharmaceutical composition comprising a therapeutically effective amount of at least a compound of claims 1-7, in admixture with pharmaceutically acceptable vehicles and excipients.
- 14) Pharmaceutical composition comprising a therapeutically effective amount of at least a compound of claims 1-7, in admixture with pharmaceutically acceptable vehicles and excipients and optionally in combination with other active ingredients.
- 15) Use of a compound of claims 1-7, for the preparation of a medicament useful for the treatment of pathologies related to a hyperactivity of carnitine palmitoyl-transferase.
- 16) Use according to claim 15, wherein said pathology is selected from the group consisting of hyperglycaemia, diabetes and pathologies related thereto, heart failure, ischemia and ketonic states.

- 17) Pharmaceutical composition according to claim 14, wherein said other active ingredient is a suitable well-known active ingredient for the treatment of diabetes.
- 18) Pharmaceutical composition according to claim 17, wherein  
5 said other active ingredient suitable for the treatment of diabetes is selected from the group consisting of sulfonylurea, L-carnitine, fibrate and other agonists of peroxisomal proliferator activated receptor (PPAR- $\alpha$ ), agonists of 9-cis retinoic acid activated receptor, HMG-CoA reductase inhibitor,  $\beta$ -sitosterol inhibitor,  
10 cholesterol acyltransferase inhibitor, biguanides, cholestyramine, angiotensin II antagonist, melinamide, nicotinic acid, fibrinogen receptor antagonists, aspirin,  $\alpha$ -glucosidase inhibitors, insulin secretagogue, insulin and glucagon-like peptides (incretins) and agonists of PPAR- $\gamma$ .
- 15 19) Use of the pharmaceutical composition any one of claims 17-18 for the treatment of diabetes.
- 20) Pharmaceutical composition according to claim 14, wherein said other active ingredient is a suitable well-known active ingredient for the treatment of obesity.
- 20 21) Pharmaceutical composition according to claim 20, wherein said other active ingredient suitable for the treatment of obesity is selected from the group consisting of fenfluramine, dextrofenfluramine, phentiramine, a  $\beta$ -3-adrenergic receptor agonist.

- 22) Use of the pharmaceutical composition any one of claims 20-21 for the treatment of obesity.
- 23) Pharmaceutical composition according to claim 14, wherein said other active ingredient is a suitable well-known active 5 ingredient for the treatment of high triglyceridemia.
- 24) Pharmaceutical composition according to claim 14, wherein said other active ingredient suitable for the treatment of high cholesterol levels and in modulating HDL plasma levels.
- 25) Pharmaceutical composition according to claim 24, wherein 10 said active ingredient suitable for the treatment of high cholesterol levels and in modulating HDL plasma levels, is selected from the group consisting of fibrates, and other PPAR- $\alpha$  agonists; inhibitors of cholesterol biosynthesis, HMG-CoA reductase inhibitors, statins, inhibitors of cholesterol absorption, 15 acyl CoA:cholesterol acyltransferase inhibitors, anion exchange resins, nicotinyl alcohol, nicotinic acid or a salt thereof; vitamin E; thyromimetics and L-carnitine.
- 26) Use of the pharmaceutical composition any one of claims 24-25 for the treatment of high cholesterol levels and related 20 diseases.
- 27) Use according to claim 26 for the treatment of hypertension, obesity, atherosclerosis, diabetes and related conditions.

**INTERNATIONAL SEARCH REPORT**

International Application No  
PCT/IT 99/00126

**A. CLASSIFICATION OF SUBJECT MATTER**

IPC 6 C07C229/22 C07C271/22 C07C275/16 C07D257/04 C07F9/54  
C07F9/6561 A61K31/195 A61K31/41 A61K31/66

According to International Patent Classification (IPC) or to both national classification and IPC

**B. FIELDS SEARCHED**

Minimum documentation searched (classification system followed by classification symbols)  
IPC 6 C07C C07D C07F A61K

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practical, search terms used)

**C. DOCUMENTS CONSIDERED TO BE RELEVANT**

Category <sup>a</sup>	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
X	WO 93 25197 A (AFFYMAX TECHNOLOGIES) 23 December 1993 (1993-12-23) page 135, line 35 - page 136, line 21 ---	1,2

NEW YORK., US ISSN: 0003-2697 page 99, scheme 1; page 102, figure 7 ---	1,2

Further documents are listed in the continuation of box C.

Patent family members are listed in annex.

<sup>a</sup> Special categories of cited documents :

- "A" document defining the general state of the art which is not considered to be of particular relevance
- "E" earlier document but published on or after the international filing date
- "L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
- "O" document referring to an oral disclosure, use, exhibition or other means
- "P" document published prior to the international filing date but later than the priority date claimed

"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

"X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

"Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.

"&" document member of the same patent family

**INTERNATIONAL SEARCH REPORT**

International application No.

PCT/IT 99/00126

**Box I Observations where certain claims were found unsearchable (Continuation of item 1 of first sheet)**

This International Search Report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1.  Claims Nos.: 19, 22, 26 and 27

because they relate to subject matter not required to be searched by this Authority, namely:

Remark: Although claims 19, 22, 26 and 27

are directed to a method of treatment of the human/animal body, the search has been carried out and based on the alleged effects of the composition.

2.  Claims Nos.:

because they relate to parts of the International Application that do not comply with the prescribed requirements to such an extent that no meaningful International Search can be carried out, specifically:

3.  Claims Nos.:

because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

**Box II Observations where unity of invention is lacking (Continuation of item 2 of first sheet)**

This International Searching Authority found multiple inventions in this international application, as follows:

1.  As all required additional search fees were timely paid by the applicant, this International Search Report covers all searchable claims.

2.  As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.

3.  As only some of the required additional search fees were timely paid by the applicant, this International Search Report covers only those claims for which fees were paid, specifically claims Nos.:

4.  No required additional search fees were timely paid by the applicant. Consequently, this International Search Report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:

**Remark on Protest**

The additional search fees were accompanied by the applicant's protest.

No protest accompanied the payment of additional search fees.
